PERSONAL DESCRIPTION

Almost graduate student from Information Technologies Degree, while in school I developed my abilities mainly in the following topics: team management, project management and web design, both with academic and working experience. In my University I've developed different projects, like web applications, platforms, web sites, servers configuration and others, for different real clients in academic exchange only. Also I have more than two years experience in different organizations: web development companies, non-government organizations, international startups and international associations.

With experience working for companies in web development, database management, design, IT support, team management, project management and strategic planning. However I'm also interested to improve my skills in information security and data mining.

SPECIALTIES
